Technical Skills

➜ **Languages:** HTML, CSS, JavaScript, C.
➜ **Frameworks & libraries:** React Native, Expo, Redux, Redux Toolkit, React Js, Node Js, Express Js, Tailwind CSS, Bootstrap, Mongoose, REST APIs, APIs, Expo navigation, react navigation.
➜ **Tools:** Postman, Vs Code, Git, GitHub, Cloudinary, Stripe, Netlify, Figma.
➜ **Database:** MongoDB

Projects

WatchMe (Similar to Youtube)   [Code]

➜ In this project I have used **MongoDB aggregation pipelines** for optimizing and processing data
➜ Easily upload image files and videos using **multer** and **cloudinary** and **view videos**, **like** and **unlike videos**, **comment** on videos, **post tweets**, and **create playlists**. They can perform **CRUD operations** on **comments**, **tweets**, and **videos**, as well as **publish** and **unpublish** content.
➜ Secure user **authentication** and **authorization** with **JWT**.
➜ Implemented **Infinite Scrolling** that increase the user Interaction by 40%.

Tech Stack: React Native + Expo, Redux, Redux Toolkit, Context API, JavaScript, Node.js, Express.js, mongoDB (Mongoose), Multer and Cloudinary.

Expo-theme-switcher (npm package)   [Live] [Code]

➜ Developed to helping **react native** expo developers
➜ Developer can install and easily configure this package in over project for toggle theme between **dark** and **light mode**.
➜ They can customize and **choose own primary and secondary colors** for both dark and light modes. These colors provide using **context api**

Tech Stack: React Native + Expo, Context API, JavaScript, Typescript.

Ecommerce App (Similar to Amazon)   [Code]

➜ In this project I have implemented **online payment with card** using stripe payment gateway and cash on delivery.
➜ Implemented secure login and registration using JWT.
➜ User can add products in Shopping Cart implemented by redux toolkit. They can perform CRUD operation,

Tech Stack: React Native + Expo, Redux Toolkit, JavaScript, mongoDB, Mongoose, Express.js, Node.js.

Practice Projects

50 JavaScript project in 50 days
I have Successfully Completed a 50-day challenge by developing 50 projects using pure HTML, CSS, and JavaScript, Each project's Source Code and Live Link are available in single repository, **click here** to check.

Other Projects
Source Code and live link available in this repo, **click here**.

HomeHub
This a mobile app to help tenants to manage rental information. tenants can track rental dates, payments, and tenant details. Rental can also access and update their information, **click here**

Education & Languages

Self-taught(PW Skills **certificate** , Google, FreeCodeCamp, Youtube)

Languages: Hindi, English
